John Holloway

-Lead Developer for application.

-Lead discussion of project in MS Teams chats, providing instructions, guidance, feed back, and templates for other team members to use.

-Drafted the original UML structure of the application. Created template versions of C# files used by the team to build the application.

-Designed, created and hosted the MySQL database used by the application.

-Created MAUI Blazor GUI for the application and built all Razor pages

-Produced video presentation

Victor Odhiambo

-Participated in the group discussions regarding the initial design of the application.

-Assisted Lead Developer in making the C# files contained within the "Models" folder of the source code, which are the objects manipulated by the application (i.e. Staff.cs or Trainer.sc)

-Provided review of the video presentation

Guntas Dhaliwal

- Participated in the group discussions regarding the initial design of the application.

-Assisted Lead Developer in making the C# files contained within the "Services" folder of the source code, which are the classes used to manipulate the various object files inside the application (i.e. StaffService.cs or TrainerService.cs)

Aiza Sabir

-Occasionally participated in group discussions

-Was provided with template Razor files to create pages for the GUI by Lead Developer and had been requested to produce additional pages following the design pattern but did not deliver anything to the team.

-Did not provide any assistance to team in the form of code, code review, nor suggestions.

-No participation in the creation of the application.
